Presentation Type: Oral

Survey the Relationship between Happiness and Quality of Life with Job Satisfaction among Iranian Teachers

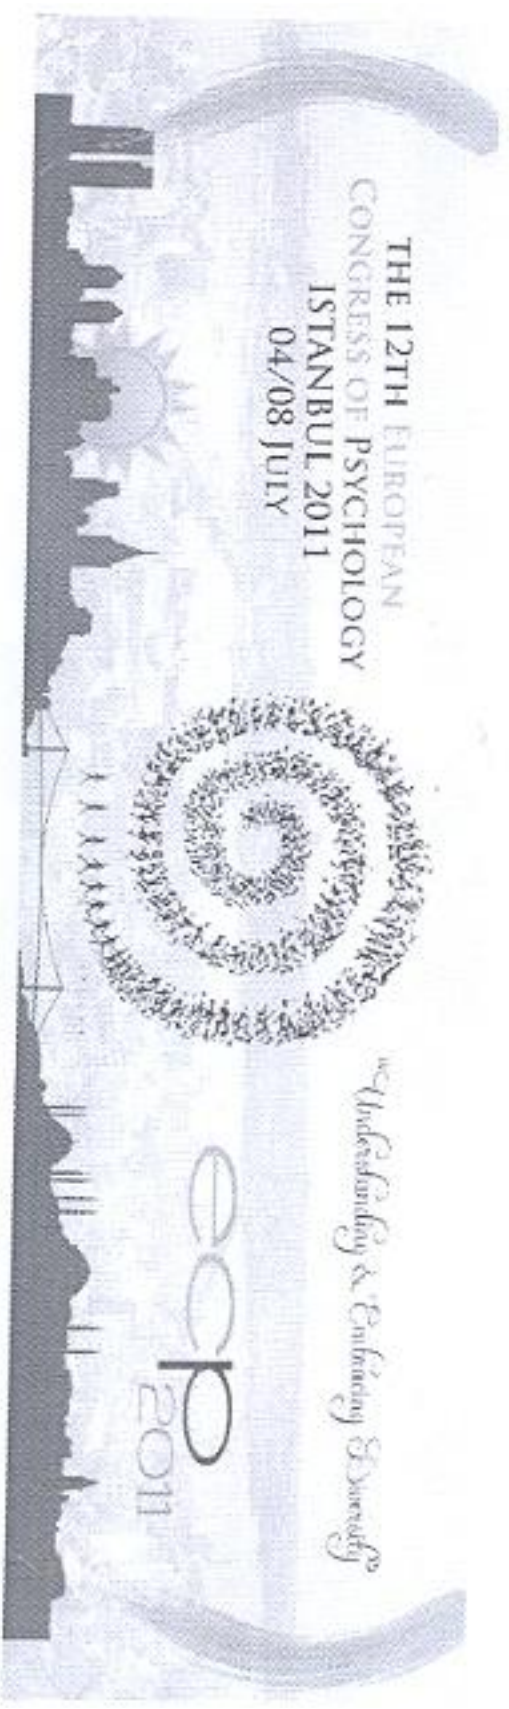

Seyed Ali Kimiaee¹, Hassan Gorjian Mehlabani¹, Reza Soltani Shal¹

¹ Department of Psychology and Educational sciences, Ferdowsi University of Mashhad

Email :Akimiaee@gmail.com

Country :Iran

Goal:The aim of this research was to investigate the relation between two of these factors, namely Happiness and quality of life with Job Satisfaction. **Method:** to this end, a clustered multistage random sampling of 150 teachers of Mashhad, Iran, high schools were selected and implemented the fildworth Job Satisfaction, Oxford happiness and WHOQOL questionnaires. The gathered data were analyzed through stepwise regression and Pearson correlation. **Findings:** The results indicated significant correlation between Job Satisfaction and happiness ($r=0/55$ $p<0.01$), Job Satisfaction and quality of life ($r= 0/45$ $p<0.01$) and quality of life with happiness ($r=0/45$ $p<0.01$). Stepwise regression indicated that happiness and quality of life could predict Job Satisfaction. **Result:** The findings proved hypothesis that between Psychosocial factors like quality of life and Happiness with Job Satisfaction exist significant correlations. The result also profit in for Experts that tries to make better programs to elevated organizational output and promotion of Educational setting
