Abstract

Pedestrian walkways play the significant role in residents' movement in cities and the traffic transfer of different areas in the city. Nowadays, the increasing population of cities and traffic problems make it essential to pay more attention to creating the sidewalks and pedestrian walkways. The development of pedestrian pathways and encouragement of the public to walk will play an important role in sustainable development. Designing based on the available laws and standards is one of the best ways for designing the pathways with characteristics above. In our country, designing the than the pedestrian pathways is less adapted to the laws and available standards. This paper seeks to investigate the standards of pedestrian and pedestrian pathways in order to determine the overall framework for designing the pedestrian pathways.

Keywords: Pedestrian zone, Pedestrian walkway, Standard, Urban planning, Urban rights.

Introduction

In general, the human was mainly considered as the criterion of everything in urbanism of ancient times and the Middle Ages and even up to the beginning of industrial revolution. The length, width and height of openings were considered as well as the proportions and distances in compliance with
